

Edition 2021 | Q2

# Generali Index Serie 75

Edition 2021 | Q2 (Data as of 30.06.2021)

#### Description

This investment plan is broadly diversified globally. The high proportion of stocks means very good income opportunities are possible, however, high value fluctuations may occur. Thanks to the selection of cost-effecient funds, income opportunities are optimised.

In order to secure income and reduce risk, the fund account savings are gradually reallocated to a low-risk investment in the last five years of the contract.

The portfolio factsheet is a general representation of your investment plan. The figures and graphics do not represent your individual returns.

### Explanation

Diversified	means a broad distribution across various sectors and regions. This diversification reduces fluctuations in value and hence the risk.
TER	The total Expense Ratio shows the annual costs of the individual investment fund. These costs are already priced into the fund
	performance.
Rebalancing	means that the distribution of savings is constantly being corrected, so that it is coordinated with the investment plan. Market fluc-

tuations lead to a deviation from the investment plan. By rebalancing, we even out these deviations.
