

RISK CONTROL 20

Investment plans Switzerland, Plan No. 274

Quarterly Report, 01.04.2020

Investment Goal

The investment objective is to achieve long-term growth of the capital invested while at the same time limiting volatility. In the core portfolio, the allocation of assets across different asset classes and instruments with attractive risk/return characteristics is determined periodically. The volatility of returns up to the maximum limit is monitored and managed using quantitative mechanisms, and, if necessary, portfolio risk is actively reduced. A maximum of 10% unhedged foreign currency risk is permitted. Maximum annualised volatility of 3% is targeted, with a maximum allocation to equities of 20%.

To establish your specific investment requirements and preferred levels of risk, we advise you to consult your advisor.

The performance is calculated on the basis on a unit-linked insurance financed through a single premium payment. Regular premiums result in other performance figures because of the different timing of the investment. Historic performance data are furthermore no guarantee of future returns. The future performance of investments cannot be deduced from previous market development, i.e. the value of an investment may fall as well as rise. The prices used to calculate performance correspond to the inventory values published by the fund management companies at the beginning of the month, plus or less any commissions.

Generali Insurances of Persons Ltd. is unable to guarantee (explicitly nor implicitly) that the published information and opinions are accurate, complete and up to date. Only the sales prospectuses for the individual funds and the General Policy Conditions are binding.
