

Generali Index Series 50

Edition 2019 | Q2 (Data as of 31.07.2019)

Description

This investment plan is broadly diversified globally. Thanks to a balanced ratio of stocks and bonds there is good income opportunity with moderate risk. The selection of cost-efficient funds optimises income opportunities.

In order to secure income and reduce risk, the fund account savings are gradually reallocated to a low-risk investment in the last five years of the contract.

The portfolio factsheet is a general representation of your investment plan. The figures and graphics do not represent your individual returns.

Explanation

- Diversified** means a broad distribution across various sectors and regions. This diversification reduces fluctuations in value and hence the risk.
- TER** The total Expense Ratio shows the annual costs of the individual investment fund. These costs are already priced into the fund performance.
- Rebalancing** means that the distribution of savings is constantly being corrected, so that it is coordinated with the investment plan. Market fluctuations lead to a deviation from the investment plan. By rebalancing, we even out these deviations.
